

Smart Raven provides an extensive portfolio of NDAA compliant and FCC approved security solutions. From video surveillance products to software and mobile apps, you can count on Smart Raven to meet your needs for video security.

In efforts to address Cybersecurity risks, the United States government created the National Defense Authorization Act (2019 NDAA Section 889) and released a list of banned technology from specific companies. Smart Raven does not have a relationship with any of the named vendors in the banned lists. Smart Raven carefully sources OEM parts and component level systems from approved vendors and manufacturers.

In 2021, the Federal Communication Commission (FCC) adapted the NDAA restrictions and continues to expand on the authorization guidelines. Smart Raven and its affiliates are not listed in the FCC list of unauthorized manufacturers.

Smart Raven systems have been deployed for:

- United States of America government for commercial, industrial and military facilities.
- U.S. State government facilities
- Counties and municipalities
- United States Postal Service
- Law enforcement agencies

As a fully compliant and approved security solution, Smart Raven stands ready to assist you with professional-level advanced technology for the best value.
